PROJECTS

RaktSetu — Blood Donation Management Platform (GitHub) (Live Demo) *2026*

Full Stack | Java, Spring Boot, Spring Security, JWT, Spring Data JPA, MySQL, React.js, Axios

- Built a full-stack platform with Admin, Donor and Patient roles, each with its own dashboard, on a 9-table relational (SQL) database.
- Owned the Patient, Blood Request and Blood Stock modules — REST APIs for profiles, requests, stock management and request tracking.
- Implemented JWT authentication, role-based authorization, DTOs and centralized exception handling; integrated the React.js frontend via Axios with protected, role-based routes.

Currency Exchange & Conversion Microservices (GitHub) *2026*

Backend | Java 17, Spring Boot 3, Spring Cloud (Eureka), Spring Security, JWT, Spring Data JPA, Maven

- Designed independent Exchange, Conversion and User services registered on a Eureka discovery server, communicating over HTTP/REST.
- Implemented stateless JWT authentication with a custom filter to protect endpoints; persisted data with Spring Data JPA and tested all APIs in Postman.

E-Commerce Website (DUCAT) (GitHub)

Full Stack | React.js, Redux Toolkit, Redux-Saga, React Router, Material UI, Node.js, Express.js, MongoDB

- Built an e-commerce app where users can log in, browse products, add to cart and buy, backed by a REST API and MongoDB.
